DETAILED ACTION

Specification

1. The disclosure is objected to because of the following informalities: at page 4, both lines 9 and 10, "110" should be "112"; at page 11, line 32, "is complete" should be "is completed". Appropriate correction is required.

Claim Objections

2. Claims 9-14 are objected to because of the following informalities: in claim 9, line 2, the perm "a first SUT to produce a first sample" should be "a signal under test (SUT) to produce a sample" in order to define SUT and no second SUT or sample was recited in claim 1 including the dependent claims 10-14. Wherein the dependent claims 10-14 depend on the independent claim 9. Appropriate correction is required.

Claim Rejections - 35 USC § 112

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

4. Claims 1-20 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 1 (lines 4 and 8), claim 2 (line 1), claim 9 (lines 6-7 and 10), claim 10 (line 2), claim 13 (line 2), claim 15 (lines 6-7 and 10), claim 16 (line 1), and claim 19

(line 2), the phrases "the bits", "the mean value", "the inter-symbol interference", "said ISI jitter", and "said DCD" all lack antecedent basis.

Wherein the dependent claims 3-8, 11-12, 14, 17-18 and 20 are either directly or indirectly depended on the independent claims 1, 9 and 15.

Allowable Subject Matter

5. Claims 9-14 would be allowable if rewritten or amended to overcome the objection(s) set forth in this Office action.

6. Claims 1-20 would be allowable if rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action.

Conclusion

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Williams et al. relates generally to the field of signal measurement, and particular to accurate measurement and analysis of time interval related parameters of periodic signals.

Yamaguchi et al. relates to a jitter measurement apparatus and method for measuring a jitter of signal under measurement output from a circuit.

Well et al. relates to a trigger jitter for removing trigger jitter from the internally triggered trace of a real time digital oscilloscope.

Jungerman et al. relates to sampling of waveforms, and particularly, to characterizing jitter of repetitive patterns using an equivalent-time sampling system.

Ward et al. relates to the field of jitter measurement, and in particular concerns an apparatus and method for measuring jitter in a signal under test with a real time digital oscilloscope.

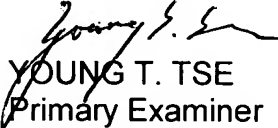

Halle et al. relates generally to automatic test equipment and process, and more particularly to testing timing characteristics of high-speed devices.

Draving relates generally to the field of signal analysis, and more particularly, relates to the analysis of jitter under clocked signals.
